

MOTOR VEHICLE CONDITION INSPECTION (BEFORE & AFTER SHIFT)

Each vehicle will have a before and after vehicle inspection. The before inspection will be signed off by the operator prior to beginning shift. The operator will fill out required information and will diligently inspect entire vehicle before its use. All damage, scratches, POL levels, property inventory, etc; will be annotated on inspection sheet in the before table. The same procedure will be implemented at the end of the shift in the after blocks. The PMCS Sheet will be turned in to the Patrol Supervisor at the end of the shift. Any additional problems will be annotated in the remark section of the inspection sheet. Deficiencies found will be automated on the vehicle maintenance status chart on the arms room door. It's the Patrol Supervisor responsibility to ensure that deficiency remarks are placed on the chart.
